FACE MASKS, VISORS, FEET PROTECTION AND GLOVES TO
ENSURE WE ARE COMPLIANT WITH THE LATEST WELSH
GOVERNMENTS COVID-19 GUIDANCE

OPTIONAL ANTIVIRAL & ANTIBACTERIAL FOGGING

The Antiviral & Antibacterial fogging process allows us to ensure rooms and surfaces are free from bacteria, fungi and viruses. We use fogging in a variety of sectors, from healthcare to education, all with the desire to achieve the same outcome: a space safe from germs. It's a unique machine that delivers an effective treatment to all surfaces when deployed. ULV fogging works by spraying a dry mist of antiviral chemical which kills 99.9999% of bacteria, fungi and viruses, including norovirus, influenza and E. Coli*

**Independently tested February 2020 to European Standard BS EN 14476*

Effective according to BS EN 14476 against enveloped viruses which includes coronavirus
